Serenity Choice™ Pro Security CommsAdapter

The EN352-2 certified CommsAdapter, together with the comfortable, ergonomic Serenity Choice Pro Security KIM 12 hearing protection, allows you to listen to radio comms while protecting you against impulse noise and keeping relevant sounds and speech. The highly integrated design allows also wearing the CommsAdapter under helmets.

Benefits

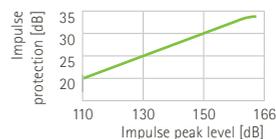

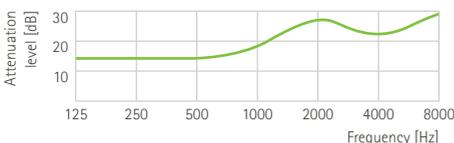

Research¹ showed that the CommsAdapter improves radio communication intelligibility in a noisy environment by at least 35 % compared to an open system, while additionally protecting the user's hearing. It also offers equal radio communication intelligibility in a noisy environment compared to a closed fitting system, but with greater situational awareness.

Hearing protection

The patented (EP3169290B1) Serenity Choice Pro Security KIM 12 filter is certified acc. to CE (EN 352-2), ANSI (S3.19-1974) and ANSI IPIL (S12.42-2010) for impulse noise of up to 166 dB with an attenuation of 33 dB. This filter is particularly suitable for single shots, rapid bursts of gunfire and explosions.
